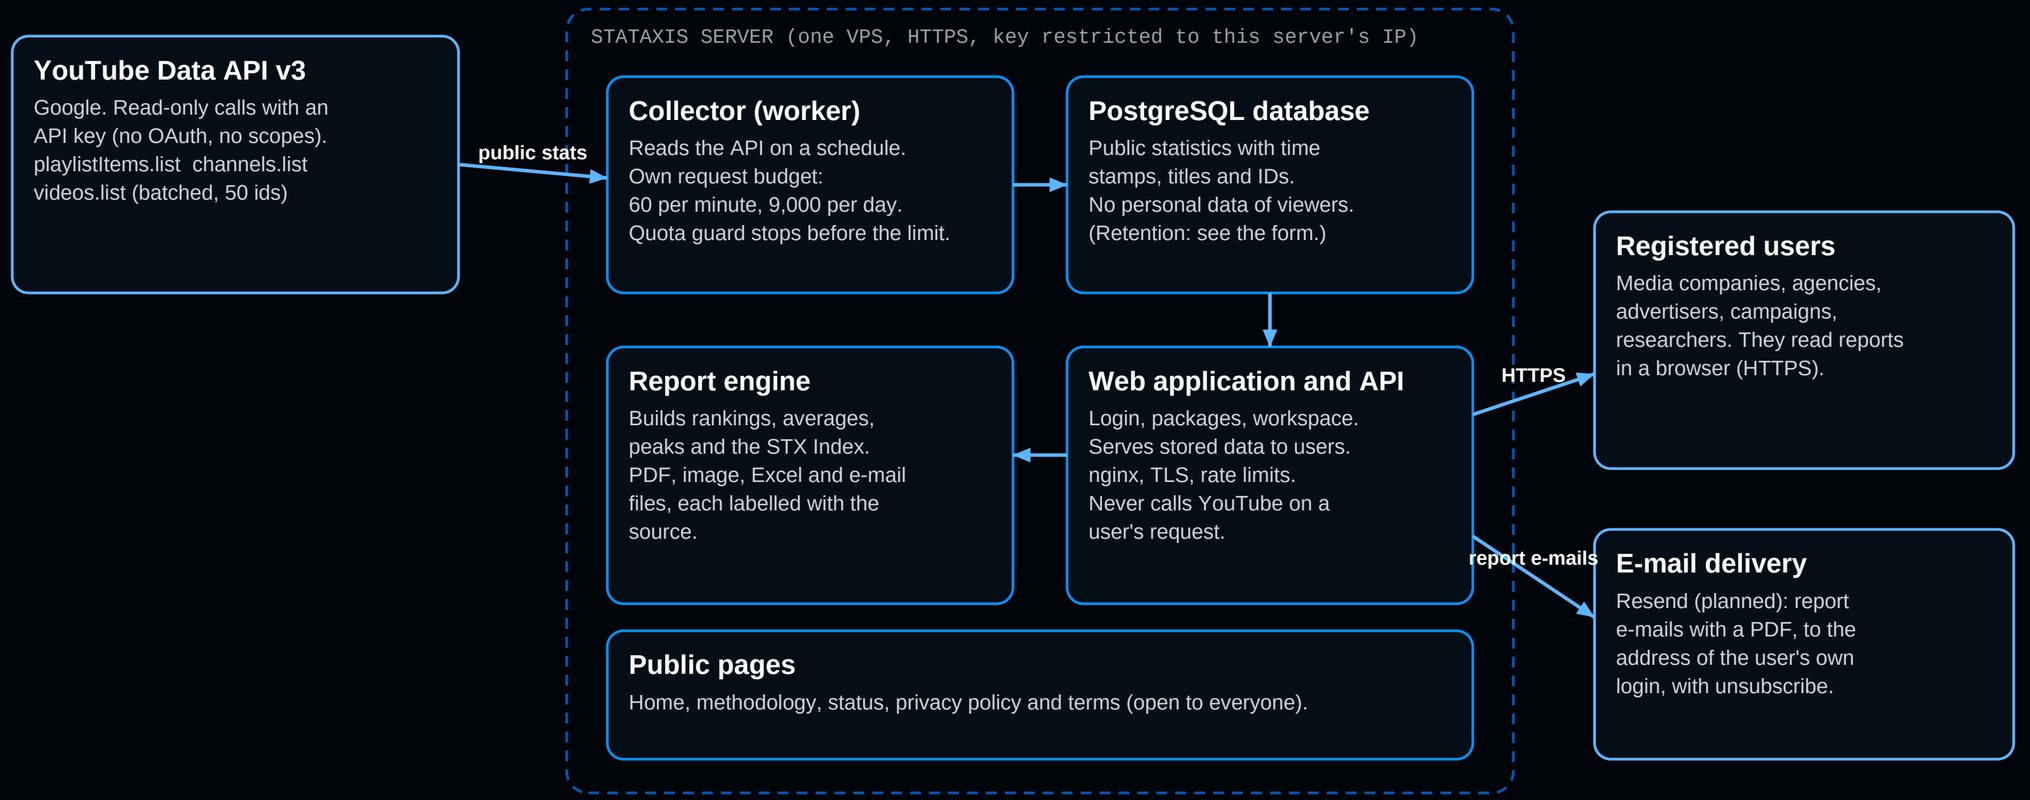

FIG. 01 - ARCHITECTURE

STATAXIS
Stat the View. Axis the Viewpoint.

STATAXIS ARCHITECTURE

A server-side application: one collector reads public YouTube data; users read StatAxis's stored data and never call the YouTube API.

Not used: OAuth, YouTube Analytics or Reporting API, the YouTube player, search.list in the live loop, any write method, any user data from YouTube.

Data flow: YouTube API > Collector > Database > Report engine / Web application > Registered users.
