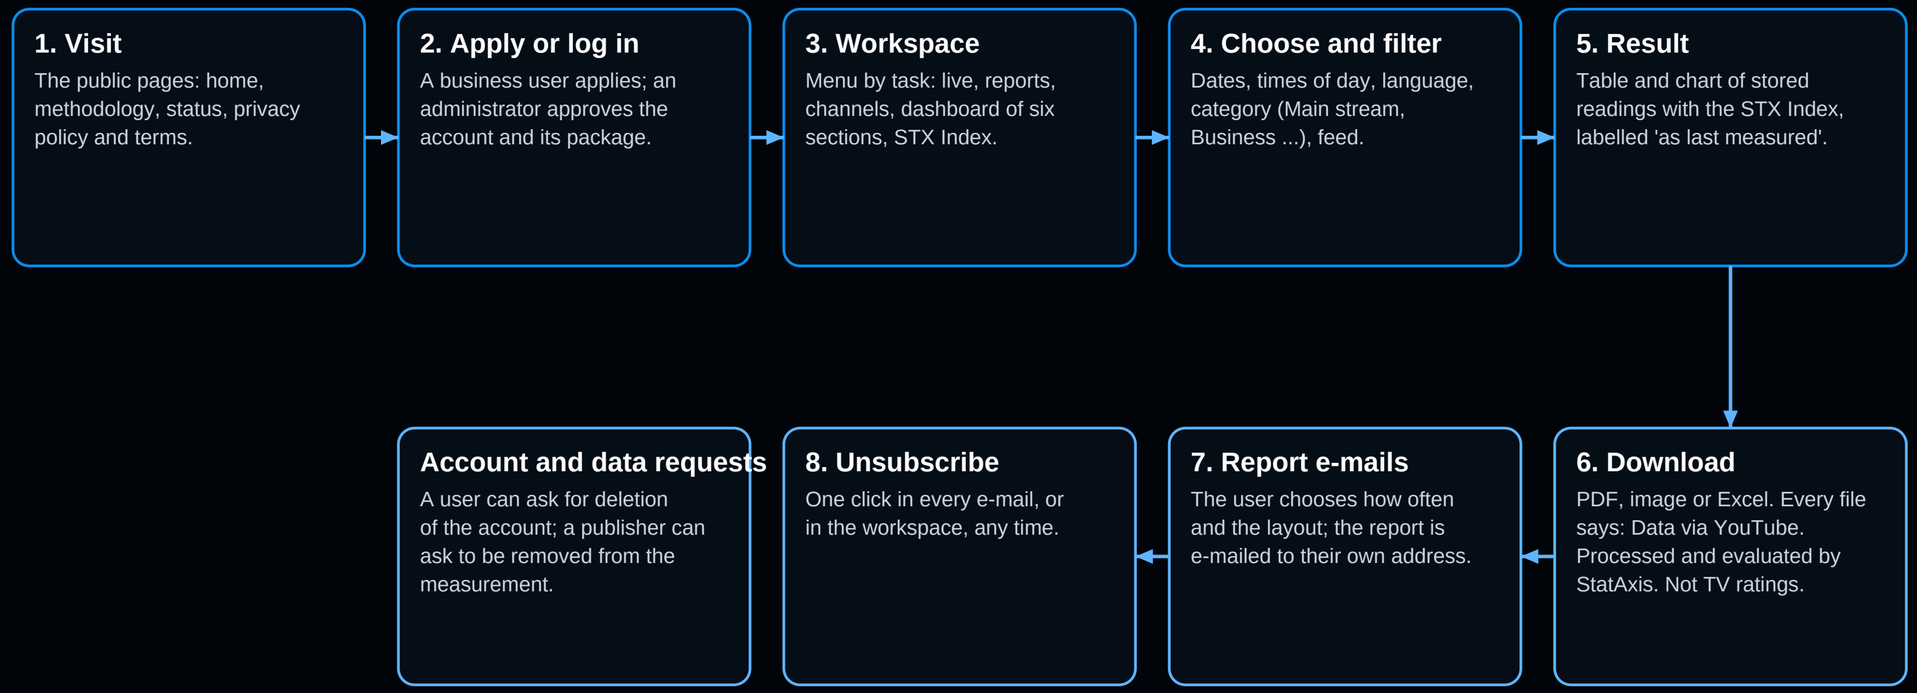

FIG. 02 - USER FLOW

STATAXIS
Stat the View. Axis the Viewpoint.

STATAXIS USER FLOW

What a user does. No step calls the YouTube API: users see StatAxis's stored readings, each marked 'as last measured'.

In the background, separately from every user step: the collector reads public data from the YouTube Data API v3 on a schedule and stores it (see the architecture diagram).

A user never triggers a YouTube API call, so the number of users does not change the quota used.
